

### **Limited Visual Dam Safety Inspection Summary Report**

MA-080

Reservoir 60

Maui, Hawaii

### Prepared by:

U.S. ARMY CORPS OF ENGINEERS HONOLULU ENGINEER DISTRICT

STATE OF HAWAII
DEPARTMENT OF LAND AND NATURAL RESOURCES

May 2006

Dam ID:	MA-080	
Name:	Reservoir 60	
	1100011011	

Limited Visual Dam Safety Inspection Conducted on: 03 April 2006
--

### I. Purpose

Due to disaster occurrences of periodic heavy rains and flooding, which has caused extensive damage to property and loss of lives, the Governor has issued a State of Emergency Proclamation extending from February 20, 2006 to April 9, 2006. In light of the tragic failure of the Kaloko dam on Kauai and the continued forecast of heavy rains, emergency inspections of all regulated dams in all counties are being undertaken.

These inspections are for the purpose of determining if any of the regulated dams and reservoirs in the City and County of Honolulu, Maui County or Hawaii County, are suspect for immediate concern to the downstream area under the prolonged conditions of heavy rain showers.

### II. Authority

Inspections are authorized under the Hawaii Dam Safety Act of 1987, Chapter 179D "Dams and Reservoirs" of Hawaii Revised Statues, and Title 13, Subtitle 7, Chapter 190, "Dams and Reservoirs" of the Hawaii Administrative Rules.

These inspections are being conducted under joint agreements of the U.S. Army Corps of Engineers (USACE), the U.S. Department of Agriculture Natural Resources Conservation Service (NRCS), and the State of Hawaii. The Memorandum of Agreement with the U.S. Army Corps of Engineers is entered into pursuant to 10 U.S.C. § 3036(d)(2), and the Intergovernmental Cooperation Act (31 U.S.C. §6505), and established via support agreement number DL-06-01.

#### III. Scope

Visual inspection will be made on parts of the embankment and appurtenant works readily available and visible for inspection by the inspection team at the time of the inspection. Such parts and appurtenant works would include the upstream slope, crest, downstream slope, abutments and toes, outlet works, and spillway.

On the date of this limited visual inspection, there may appear to be no immediate threat to the safety of the dam, however no assurance can be made regarding the dam's condition after this date. Subsequent adverse weather and other factors may affect the dam's condition.

Dam ID:	MA-080
Name:	Reservoir 60

#### IV. Limitations of Findings and Recommendations

The inspection is based only on visible features/areas of the dam on the day of inspection. The inspection does not entail detailed stability, hydrologic, hydraulic, or seismic investigations. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies.

### V. Inspection Team

Organization
U.S. Army Corps of Engineers

Name / Title
John Dillon, P.E.

Geotechnical Engineer

State of Hawaii, Dept. of Land and Natural Resources Curtis Powers

DNLR, Engineering Division

#### VI. Owner's Representatives Present

Hawaiian Commercial & Sugar Company, a Division of Alexander and Baldwin, Inc.

Randall Moore Garret Hew

#### VII. Summary Report Team

Organization
U.S. Army Corps of Engineers
Derek Chow
Bill Empson

State of Hawaii, Dept. of Land and Natural Resources Denise Manuel

Edwin Matsuda

#### VIII. Dam Type

The dam appeared to be an earthen embankment dam.

Dam ID:	MA-080
Name:	Reservoir 60

#### IX. Dam Classification

The current hazard classification of this dam is: High

Hazard Potential Classification based on the following:

Category	Loss of Life	Economic Loss
Low	None Expected	Minimal (undeveloped to
		occasional structures
		or agriculture)
Significant	Few (No Urban development and no more than a small number of inhabitable structures)	Appreciable (Notable agriculture, industry or structures)
High	More than a few	Extensive community, industry or agriculture.

Based on inventoried storage and height data, the size classification of the dam is: Small

Size Classification based on the following:

Category	Storage (Acre-Feet)	Height (feet)
Small	< 1000	< 40
Intermediate	> 1000 and < 50,000	> 40 and < 100
Large	> 50,000	> 100

#### X. Summary of Inspection

Condition Rating Criteria: The conditional terms in this report are used to generally describe the conditions below. Inspections, monitoring, and additional investigations are considered to be incidental to all condition ratings.

Satisfactory Expected to fulfill intended function.

Fair Expected to fulfill intended function, but maintenance is

recommended.

Poor May not fulfill intended function; maintenance or repairs are

necessary.

Unsatisfactory Is not expected to fulfill intended function; repair, replacement, or

modification is necessary.

Unknown Not visible, not accessible, not inspected, or unable to determine

the condition rating based on the observation taken.

Dam ID:	MA-080
Name:	Reservoir 60

#### A. General appearance:

The earthen dam and reservoir is used for irrigation purposes. Trees are growing in various locations on the dam. No recent improvements or modifications were apparent.

Modifications / Improvements: There were no signs of any recent modifications.

Findings and Corrective Actions:

- a. The Owner shall maintain documentations including Construction plans, specifications, improvements, modifications, Operations and Maintenance Manuals and routine inspection logs for this dam facility.
- b. An EAP is required for High Hazard Dams. Submit an updated EAP for this facility.
- c. Submit narrative and additional information detailing the improvements, modifications, and/or alterations at the dam site, unless covered by approved dam permit.
- d. Routine inspection logs were not inspected.
- e. The dam did not appear to be maintained on a regular basis.
- f. Access to site appears to be satisfactory.
- g. Provide a detailed narrative of the incident, responses taken, and any damages incurred. Dam owners are required to promptly advise the department of any sudden or unprecedented flood or unusual or alarming circumstance or occurrences, which may adversely affect the dam or reservoir.
- Submit current Operations and Maintenance Manual or Procedures for this dam / reservoir facility.
- i. Submit Site or Facility Map of this Dam which identifies the location of major features including outlet works controls and conduits.
- j. Emergency Alarms / Monitors: There were no alarms or monitors observed on this reservoir.
- k. Power / Communication: There were no communication systems observed on this reservoir. There were no utility or power poles visible nearby.

#### B. Access / Security:

Access to the dam was accomplished via a County roadway. Access requires a 4-wheel drive vehicle.

Access to dam is questionable during severe weather conditions. Operational plans need to reflect this deficiency or access improved.

Security issues: Valves are locked. Access to the dam is via several locked gates.

Dam ID: _	MA-080
Name:	Reservoir 60

#### C. Intake Works: (Satisfactory)

There is one 24ft by 8ft deep-gated rock lined channel inlet feeding the reservoir. The intake has the ability to be shut off or diverted away from the reservoir during periods of heavy rains. This is done manually.

Findings and Corrective Actions:

- a. The intake works were not tested.
- b. The intake works appeared to be in satisfactory condition, no corrective actions are required at this time.

#### D. Reservoir: (Satisfactory)

The reservoir level during the inspection was 13 feet.

According to staff personnel, the reservoir is normally operated between the ranges of 0-15'.

Findings and Corrective Actions:

a. The reservoir appeared to be in satisfactory condition, no corrective actions are required at this time.

#### E. Upstream Slope: (Fair)

The upstream slope varied in slope and ranged from a 1 on 2 slope.

A fitted rip rap rock slope protection was observed. Erosions were not visible; the slope was not entirely visible.

Cracks were not visible; the slope was not entirely visible.

Sinkholes were not visible; the slope was not entirely visible.

Findings and Corrective Actions:

- a. The upstream slope appeared to be in fair to poor condition and requires corrective action.
- b. The upstream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.
- c. Tree(s) were observed on the dam embankment. Trees have been identified as the probably cause of piping failures, and can possibly cause sever damage to the embankment if they are uprooted during a high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2" diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.

Dam ID:	MA-080
Name:	Reservoir 60

#### F. Crest: (Fair)

The dam crest was approximately 20 feet wide.

There was access to the crest via a roadway.

Cracks were not visible, however the crest was not entirely visible.

Sinkholes were not visible, however there were some dips on the crest.

Heavy vegetation was visible on the edges of the crest. These were primarily small woody vegetation and high grass.

#### Findings and Corrective Actions:

- a. The dam crest appeared to be in fair to poor condition and requires corrective action.
- b. Portions of the crest were not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.

#### G. Downstream Slope: (Fair)

The downstream slope was in fair to poor condition and not visible due to heavy vegetation. The slope was very steep, around a 1 on 2 slope.

There was access to the downstream slope via a roadway along the downstream toe.

Erosion was not visible on the downstream slope.

Sinkholes were not visible on the downstream slope, however the slope was not entirely visible.

Low ground cover vegetation was observed on the downstream slope.

Seepage was not observed on the downstream toe, however the slope was not entirely visible.

#### Findings and Corrective Actions:

- a. The downstream slope appeared to be in fair to poor condition and requires corrective action.
- b. Rut and/or Gully erosion was observed on the slope, which requires maintenance and/or repair.
- c. The down stream slope was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.
- d. Tree(s) were observed on the downstream slope. Trees have been identified as the probably cause of piping failures, and can possibly cause sever damage to the embankment if they are uprooted during a high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2" diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.

Dam ID:	MA-080
Name:	Reservoir 60

#### H. Abutments / Toe: (Fair)

The abutments and toe were not entirely visible or identifiable due to heavy vegetative growth.

Erosion along the abutment or toe was not visible.

Cracks in either direction were not visible, however the crest was not entirely visible.

There was heavy vegetation along the abutments and toe locations.

#### Findings and Corrective Actions:

- a. The abutments/toe appeared to be in fair to poor condition and requires corrective action.
- b. The abutment/toe area was not visible due to high grass and bush vegetation. Clear high vegetation and maintain low to enable easy visual inspection.
- c. Tree(s) were observed along the abutment/toe. Trees have been identified as the probably cause of piping failures, and can possibly cause sever damage to the embankment if they are uprooted during a high winds. Corrective action is required to remove the tree hazards from the dam. Acceptable remedies include removal of the tree and its root structure down to a 2" diameter and reconstructing the damaged embankment section. All repair work shall be accomplished as per the requirements of licensed geotechnical or structural engineer. Routinely monitor the damaged area for signs of settlement and seepage.

#### I. Outlet Works: (Satisfactory)

The outlet works appeared to be two 24" steel pipes.

Not inspected in detail, not tested. The outlet works was controlled via a gate valve on the upstream side of the dam. Seepage was not visible flowing near the exit of the outlet works from the dam.

#### Findings and Corrective Actions:

- a. The outlet works were not tested.
- b. The outlet works appeared to be in satisfactory condition, no corrective actions are required at this time.

### J. Spillway: (Fair)

This spillway consisted of one 36" CMP pipe.

The spillway approach was clear.

There was headcut erosion observed at the outlet exit.

Further investigations should be conducted to conclude the capacity of the spillway.

#### Findings and Corrective Actions:

- a. The Spillway appeared to be in fair to poor condition and requires corrective action.
- b. Unclear if spillway is adequately sized. Spillway should pass the probable maximum flood. Verify spillway capacity and take corrective action as required.

Dam ID:	MA-080	-
Name:	Reservoir 60	

### K. Down Stream Channel: (Unknown)

The down stream channel was not investigated.

Findings and Corrective Actions:

a. The downstream channel was not inspected.

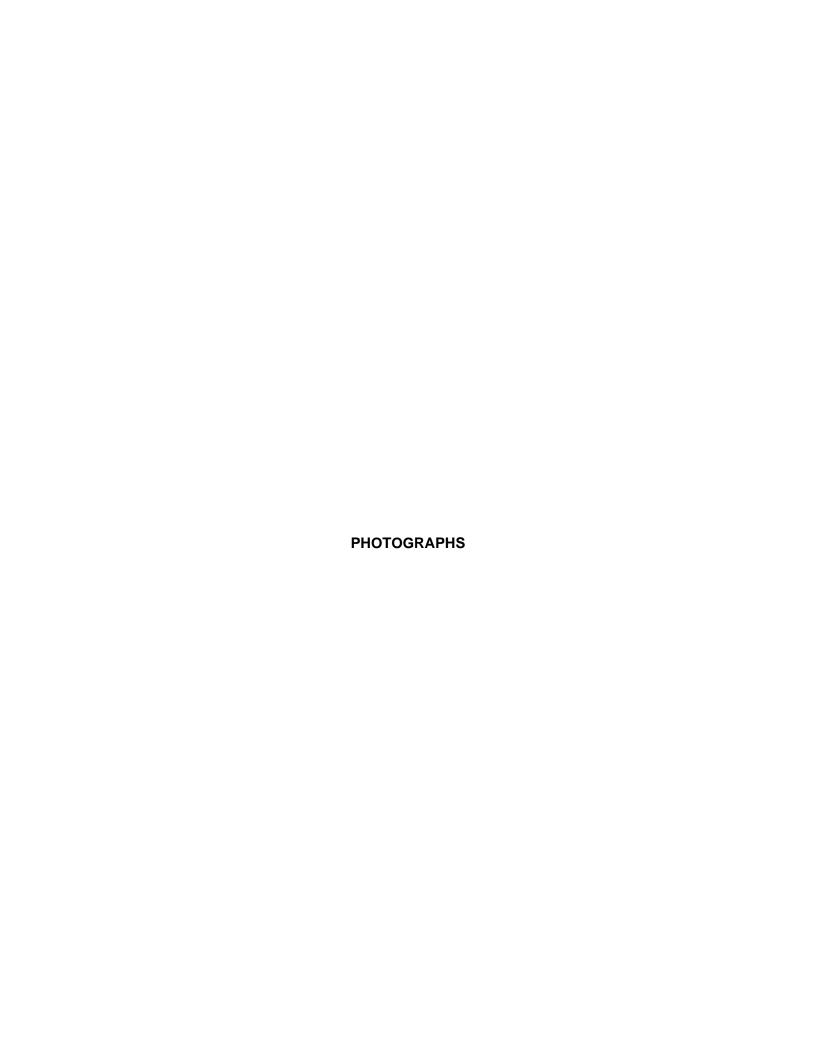

### **XI. Additional Comments:**

No immediate dam safety threats.

Woody vegetation and roots should be removed from dam.

Daily management of water levels is required to allow for safe operation of dam

Spillway is very small – emergency spillway channel does not exist.

### Limitations and Intent of this Dam Safety Inspection:

This Dam Safety Inspection was conducted to assess the general overall condition of the reservoir/dam, identify visible deficiencies, and recommend areas of for monitoring, additional investigative studies and corrective actions. The inspection is based only on visible features/areas of the dam on the day of inspection. This inspection is not a formal phase I or phase II dam safety inspection and does not include a review or evaluation from each specialist of an inspection team, such as a geologists, civil, geotechnical, structural, or hydraulics engineer. The owner should verify the findings of this report and take corrective actions. The owner may submit to the State alternative corrective actions that are certified by a licensed professional engineer in the State of Hawaii experienced in the design and construction of dams. This inspection does not relieve the owner/operator from their responsibility to conduct routine inspections, maintenance, repairs, modifications, monitoring, documentation, and/or investigative studies. The inspection was conducted under the authority of the Hawaii Revised Statures Chapter 179D, and Hawaii Administrative Rules, Title 13, Chapter 190, titled "Dams and Reservoirs". Questions regarding this inspection should be forwarded to the Hawaii State Dam Safety Program; PO Box 373; Honolulu, Hawaii 96809; Ph. (808) 587-0236.

Revised: Dec. 1, 2003
